

Profile Description

- Name: Jonathan Natanael Siahaan
- Nationality: Indonesia
- Location: Indonesia, Jakarta
- Phone: +62 821-1414-2028
- Email: js.jonathan.n@gmail.com
- Hobby: Tennis, music

Summary

Agnostic language software engineer who is passionate about finding simple solutions for complex problems, and has over 10 years of demonstrated experience in building high-quality software.

Technical Profile

- **Programming Language/Frameworks:** Java, Kotlin, Node.js, Javascript, ReactJS, Ktor (Kotlin), Springboot, Express.js, Python, PHP, Golang, Ruby, Rails
- **Data Store:** PostgreSQL, MongoDB, Redis, MySQL
- **Streaming:** Google pubsub
- **Platform:** Kubernetes, Jenkins, Docker, Ansible, GitlabCI, Helm, Flagger, Metabase, Gloo Api Gateway, Datadog, Kibana, Envoy, Nginx, Aiven, Sidekiq
- **Cloud:** AWS, GCP
- **Methodology:** Domain Driven Design, Event Sourcing, CQRS, Event Driven Architecture, Clean Code, Test Driven Development, SAGA, Distributed System Development, Blockchain, Decentralized System, Canary Deployment, Blue Green Deployment, Replication Database Strategy
- **Other:** REST, GraphQL, Git, Sonarqube, Websocket, GRPC

Competencies

Technical expertise: Have a wide range of knowledge, including design patterns, programming languages, development tools, development methodology, refactoring strategy, deployment strategy, managing high concurrency systems, system scale-up strategy

Leadership skills: Provide guidance and direction to the development team, manage projects and timelines, and communicate effectively with stakeholders

Problem-solving ability: Identify and analyze complex problems, develop simple solutions, and implement them effectively, able to prevent any kind of over-engineering for simple problems, 6 years working on a large system with high concurrency traffic.

Continuous learning: Keeping up-to-date with emerging technologies and industry trends, and integrating new knowledge into work. Currently working on artificial intelligence technology and blockchain technology as part part-time job.

Experience

vidio.com

Senior Software Engineer – Jakarta 2019 – Present

Technologies:

- Java, Kotlin, Ruby on rails, Jenkins, Kubernetes, Google cloud, Mysql, Postgresql, Redis, Google pubsub, Opsgenie, Ansible, Javascript, Metabase, Datadog, Gloo, Envoy, Nginx, Kibana, Aiven, Helm, Flagger, Sidekiq, Sonarqube

Responsibility

- Research and applied new methodology or technology to the existing services
- Collaborated with the business and product teams
- Develop and designing new services
- Maintain and improve existing services
- Maintain and improve the CI/CD pipeline
- Collaborated with devops to improve and maintain cloud infrastructure
- Collaborated with DevOps and Backend Engineer to maintain database
- Work closely with VP Engineer to identify existing problems and improve existing system
- Review incoming merge request

Achievement

- Reduce production bug by implement canary deployment
- Reduce operational cost in notification system
- Reduce system downtime by implement a proper auto rollback mechanism, monitoring system, and alert mechanism using opsgenie
- Speed up payment completion time from average 10 minutes to be 1 minutes
- Create a circuit breaker mechanism for all external API call
- Design and develop high concurrent system including chat system and notification system
- Developed chat system with low latency and high processing speed
- Increase delivery rate of notification system from 80% to 99.9%
- Migrate the Chat system, Notification system, and Engagement system to the Kubernetes platform with zero downtime
- Improve user engagement and time spent on the chat platform

- Improve the payment system in terms of processing speed, scalability, reliability, maintainability, network fault, and data consistency
- Speed up deployment completion time to production by moving out several systems from Google Cloud VM to Kubernetes
- Manage to save 30% of database storage usage
- Create and maintain a monitoring system using Datadog for production services (Payment system, chat system, notification system, and engagement system)
- Create a realtime monitoring for payment processing time
- Able to identify problem by using data driven methodology
- Manage to tackle the possible lost of 422,705 usd from recurring partner transactions.
- Create a seamless payment system for all business partners to reduce development effort

Self Employed

Tech Consulting – Jakarta 2024 – Current

Technologies:

- Nodejs, Python, C++, Google cloud, AWS, AWS RDS, Mysql, Redis, Opsgenie, Javascript, MongoDB, React native, React web

Responsibility

- Provide strategic and technical consulting to individuals and organizations
- Research new technology
- Design and implement solutions
- Collaborated closely with clients to gather information
- Provide technical guidance
- Ensure software meet requirement without sacrificing performance, security and complexity

Achievement

- Optimized cloud infrastructure cost
- Developed grocery inventory store item supply management with realtime object detection using YOLOV8
- Advice clients on using private blockchain
- Developed car service booking system by using Node js, Mysql and AWS without adding unnecessary complexity

Ternakuang

Head of Engineering – Jakarta 2019 – 2021

Technologies:

- Nodejs, golang, RUST, Jenkins, Kubernetes, Google cloud, AWS, AWS RDS, Mysql, Redis, Opsgenie, Javascript, Metabase, Datadog, Envoy, Nginx, Kibana, Helm, MongoDB, PHP, Wordpress, React native, React web

Responsibility

- Collaborated and manage a remote team from India
- Research and applied new technology
- Collaborated with product teams
- Collaborated closely with DevOps engineer
- Automate task through appropriate tools
- Design and implement all cloud infrastructure
- Led and mentoring 15 engineers
- Collaborated closely with CEO
- Provide technical guidance and coaching to engineers
- Define all aspects of development and coding standards
- Ensure software meet requirement without sacrificing performance, security and complexity
- Develop high level product specifications with attention to system itegration and feasibility

Achievement

- Implement microservice architecture to improve scalability
- Reduce infrastructure cost by migrate the whole infrastructure from aws to GKE
- Implement self hosted prometheus to reduce cost
- Increase website performance by 60%
- Migrate a costum wordpress system to fully micro service run on google cloud
- Develop a high processing speed, secure and reliable payment system
- Develop cloud infrastructure with nearly zero downtime
- Develop and design CI/CD pipeline from scratch
- Develop and design all services
- Develop high performance services
- Manage to implement new technology without sacrificing engineer productivity

Blackberry Messenger

Full Stack Software Engineer – Jakarta 2017 – 2019

Technologies:

- Java, Kotlin, Node js, C++, Javascript, Ruby on rails, Spring boot, GRPC, Websocket, Jenkins, Google cloud, Redis, Opsgenie, Datadog, Kibana, React web, Android, IOS

Responsibility

- Collaborated with a remote team from Canada
- Research and applied new technology
- Collaborated with product teams
- Collaborated closely with DevOps engineer
- Develop high quality code
- Bug fixing
- Automate task through appropriate tools
- Collaborated with other engineers on develop new features

Achievement

- Implement 2 new products: web chat system and news website
- Integrate new web chat system with old system run on pure Java server and C++
- Develop low latency chat system
- Collaborate with devops to migrate old chat system from on-premise service to cloud based with zero downtime
- Develop and design CI/CD pipeline from scratch
- Involved in decision making of any architecture design
- Manage to develop client SDK with C++ with zero bug
- Reduce latency on chat system from 3 seconds to be 100 milliseconds

Bornevia

Senior Software Engineer – Jakarta 2016 – 2017

Technologies:

- Java, Node js, Javascript, Ruby on rails, Websocket, AWS, MongoDB, PostgreSQL, Angular Js, Android, Express

Responsibility

- Collaborated with product manager

- Research and applied new technology
- Collaborated closely with CTO
- Develop high quality code
- Bug fixing
- Develop and maintain products run on Android, and Web
- Collaborated with other engineers on develop new features

Allegro

Java Engineer – Jakarta 2015 – 2016

Technologies:

- Java, Mysql, Javascript

Responsibility

- Collaborated with product manager
- Bug fixing
- Collaborated with other engineers on develop new features

Other Information

Education

- Bachelor Degree
Perbanas Institute of Technology
Information System
2017 - 2019
- Diploma
Del Institute of Technology
Computer Science
2012 - 2015

Awards

- Semifinalist Asia Open Data Hackathon
- Semifinalist Wildcard Program Imagine Cup 2014
